

CAR-T Study Day

Virtual

Monday 26th July 2021

Audience:

Nurses, doctors, and other health care professionals working in specialities where this intervention is currently available, i.e. haemato-oncology, and/or in the context of clinical trials for a range of solid tumours, or who work in referring centres for CAR-T therapy.

Aims:

Immune effector cell therapies, including Chimeric Antigen Receptor T Cell Therapy (CAR-T), are an exciting new therapeutic intervention for certain malignancies. This innovative cancer treatment contributes to our existing repertoire of immunotherapy and is integral to the concept of personalised medicine.

The study day will give delegates the opportunity to explore the current immunotherapy landscape and the role of CAR-T as a systemic anti cancer therapy. The day will raise awareness of the complex patient pathway and the myriad challenges experienced by patients, carers, and the service.

Cost:

£50 per delegate
